

INTRODUCTION

CNC machines are real Mechatronic systems, having electrical and electronic circuits interacting with mechanical actuators / sub systems. Diagnostics and root cause analysis is an important aspect of maintenance, which is most often ignored. Often the roots of a mechanical problem are in the electronics area and that of an electronic problem lies elsewhere. Thorough understanding of the CNC Machine Electrical circuit diagram, Hydraulic diagram, Pneumatic diagram and Lubrication diagram is needed to find and fix the root cause to minimize MTTR (Mean Time To Repair) and effective planning of PMBF(Preventive Maintenance Before Failure) towards zero down time.

Keeping this in view, Indian Machine Tool Manufacturers' Association (IMTMA) is organizing a 3 days training on **Servicing, Maintenance and Troubleshooting of CNC Machine Tools - Electrical Aspects**.

FOCUS AREAS

- Anatomy of CNC machines – Overview of various sub-systems of CNC Turning and Machining Centres.
- Systematic approach to diagnostics and problem solving.
- Circuit Diagram study – Electrical and electronic circuits
- Circuit Diagram study – Hydraulic, Lubrication and Pneumatic sub systems
- Maintenance aspects in CNC controllers
- Typical problems in Electrical and Electronic sub-systems; Safety aspects; Alarm messages, Alarm History and Operations History
- Maintenance aspects of drives and encoder
- Demo and Group exercises in electrical circuit diagram study
- Demo of Do's and Don'ts in CNC controllers
- CNC memory data backup

KEY TAKE AWAYS

After undergoing the programme, the participants will be able to learn -

- How to carry out preventive and break-down maintenance of CNC machines
- Identifying faults in various components of CNC machines, at the shortest time to bring down MTTR time.
- How to report faults correctly to the manufacturer-CNC System Support
- Sub systems and circuits of CNC machines

PARTICIPATION FEE

Rs. 12500/-
+18% GST

**IMTMA Members/ Micro Companies/ Individuals/
Educational Institutions / Students/ IMTMA Non
Members/ Others**

USD 500/-
Overseas Participants

Group Concession : 10% for 3 to 5 and 20% for 6 and more delegates being nominated from the same company

PARTICIPANT PROFILE

This programme will benefit managers, engineers and middle management personnel involved in the functions of maintenance of CNC machines from machine tool, automobile and auto ancillaries, tool rooms, aerospace, defence & railway establishments, general engineering and other manufacturing industries.

Note: Participants are expected to have a basic working knowledge of CNC Machines as the constructional aspects of CNC machines will not be discussed in detail in this programme.

FACULTY

This program will be conducted by **Mr. Ramadas Nambi**.

Mr. Ramadas R Nambi is an industry expert with over 30 years of experience in the area of CNC control systems, CNC machines, Industrial robots & Unmanned operations. Presentations will be accompanied by practical demonstrations and case studies. The workshop will be highly interactive where participants will be able to discuss specific problems in maintenance and solicit feedback from the expert faculty.
